专栏首页 码匠的流水账 聊聊skywalking的TraceSegmentServiceClient

聊聊skywalking的TraceSegmentServiceClient

2020-03-03 阅读 460

序

本文主要研究一下skywalking的TraceSegmentServiceClient

ServiceA

TraceSegment-1

1. Create entry span

2. Extract (done, but got nothing)

3. Create exit span

4. Inject

5. Stop exit span

6. Stop entry span

TraceSegment-2

1. Create entry span

2. Extract ContextCarrier

3. Create Exit/Inject/Stop Exit

4. [Async Module]

1. Create Local span

2. Capture Snapshot

3. [New Thread]Continued Snapshot

4. Create Local span

5. Stop entry span

ServiceB

New Thread

TraceSegment-3

1. Create entry span

2. Extract ContextCarrier

3. Create exit span

4. Stop exit span

5. Stop entry span

ServiceC

MySQL1

TracingContextListener

skywalking-6.6.0/apm-sniffer/apm-agent-core/src/main/java/org/apache/skywalking/apm/agent/core/context/TracingContextListener.java

```
public interface TracingContextListener {
    void afterFinished(TraceSegment traceSegment);
}
```

TracingContextListener定义了afterFinished方法，其参数为TraceSegment

TraceSegment

skywalking-6.6.0/apm-sniffer/apm-agent-core/src/main/java/org/apache/skywalking/apm/agent/core/context/trace/TraceSegment.java

```
public class TraceSegment {

    private ID traceSegmentId;

    private List<TraceSegmentRef> refs;

    private List<AbstractTracingSpan> spans;

    private DistributedTraceIds relatedGlobalTraces;

    private boolean ignore = false;

    private boolean isSizeLimited = false;
```
